Discussion on Inputs into the Statement of 15th AOGEO Symposium

- Indonesia
- Myanmar
- the Philippines
- Sri Lanka

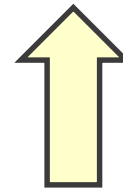

Kumamoto Declaration
Explore what role science and technology should play in the **cross-sectoral decision-making of leaders.**

Showcase

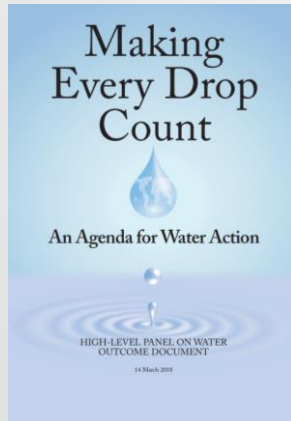

Chair's Summary

Platforms on Water Resilience and Disasters

OSS-SR as a key knowledge base
Facilitators as trustable human resources
Water Cycle Consilience
End to End Approach

Concept

Launching

AWCI contributed to the Platforms on Water Resilience and Disasters in each member country by integrating the "Online Synthesis System for Sustainability and Resilience (OSS-SR)" as a key knowledge base of each Platform and fostering "Facilitators" as trustable human resources through effective use of e-learning.

The achievements in Indonesia, the Philippines, and Sri Lanka were introduced at the Showcase special session of the 4th Asia-Pacific Water Summit and reflected in the Summit Chair's summary.

Implementation

By enhancing the functions of the OSS-SR and the Facilitators and promoting water cycle consilience, AWCI will continue to support the Platforms and their cross-sectoral decision making at local to national levels in order to promote transformation into quality-oriented societies that are resilient, sustainable, and inclusive.

AWCI will present its plans, on-going activities, and achievements at high-level meetings, e.g., the UN Water Conference to be held in New York in March 2023, and expand its activities to various countries.
